The global Tubular Arrester market size is expected to reach $ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A tubular arrester is a type of surge arrester that uses a protective gap with high arc extinguishing ability to protect electrical equipment from high transient over-voltage hazards during lightning strikes or switching operations. It consists of two series gaps: one in the atmosphere, called the outer gap, and one in the air pipe, called the inner gap or the arc extinguishing gap. The tubular arrester is mostly used for lightning protection on power supply lines.

This report studies the global Tubular Arrester production, demand, key manufacturers, and key regions.
