The 'Nitrosamine Impurity Test' is a laboratory analysis or assay designed to detect and quantify the presence of nitrosamine impurities in pharmaceuticals and other products. Nitrosamines are a group of organic compounds known for their potential carcinogenic properties in humans. They can form as impurities in certain drug products during the manufacturing process or storage.

Regulatory agencies, such as the FDA and EMA, have been actively monitoring nitrosamine impurities in pharmaceuticals and other products. They have issued guidelines and requirements that mandate manufacturers to test for nitrosamines and to take appropriate actions if levels are found above acceptable limits. This has led to more rigorous testing and compliance standards.
