Abstracts

Antifreeze Preparations Manufacturing

Hot and cold

The Antifreeze Preparations Manufacturing industry experienced volatile performance during the past five years, as demand from consumers and automakers took a turn for the worse. Industry revenue is set to rebound slightly over the next five years, as firms take advantage of exports and demand for new cars picks up. Nevertheless, high oil prices will continue to threaten overall profit margins.

This industry manufactures antifreeze. Also known as coolant, antifreeze reduces the freezing point of water while raising the boiling point, and it is used to maintain proper engine functionality. After production, firms distribute the final products to automotive manufacturers and retail channels.

This report covers the scope, size, disposition and growth of the industry including the key sensitivities and success factors. Also included are five year industry forecasts, growth rates and an analysis of the industry key players and their market shares.
