The global Recycled PET Glycolysis Catalysts market size is expected to reach $ 1501 million by 2032, rising at a market growth of 7.6% CAGR during the forecast period (2026-2032).

Recycled PET glycolysis catalysts are catalytic materials specifically formulated to depolymerize polyethylene terephthalate (PET) waste via glycolysis the reaction of PET with ethylene glycol (EG) to produce bis(2?hydroxyethyl) terephthalate (BHET) monomer, which can be repolymerized into virgin?quality PET resin. In 2025,global recycled PET glycolysis catalysts production reached approximately 435,770 ton, with an average global market price of around USD 2,000 per ton. A factory gross profit of USD 500 per ton with 25% gross margin. A single line full machine capacity production is around 10,000 ton per line per year. The upstream is dependent on ethylene glycol, catalyst raw materials and PET waste. The downstream demand is concentrated in packaging, textiles and industrial recycling. Magnetic catalyst glycolysis used in recycled PET for food?contact applications. Recycled PET glycolysis catalysts are catalytic materials specifically formulated to depolymerize polyethylene terephthalate (PET) waste via glycolysis the reaction of PET with ethylene glycol (EG) to produce bis(2?hydroxyethyl) terephthalate (BHET) monomer, which can be repolymerized into virgin?quality PET resin.China market is driven by large market and focus on sustainability.
