Abstracts

Dye & Pigment Manufacturing in the US

After volatile performance over the past five years, the Dye and Pigment Manufacturing industry is expected to continue struggling against increased import penetration. The US economy's returning health bodes well for industry products, which are used as inputs for a variety of other manufacturing industries. However, industry players are consolidating and reorganizing production in hopes of offsetting rising oil and raw materials prices.

This industry manufactures synthetic organic and inorganic dyes and pigments, such as lakes and toners (except electrostatic and photographic). As such, the industry produces various pigments and dyes, including color, lead, chrome, metallic and zinc-based pigments as well as disperse, vat and direct dyes. A chemical intermediate product, these pigment and dyes are used to impart color to numerous products.

This report covers the scope, size, disposition and growth of the industry including the key sensitivities and success factors. Also included are five year industry forecasts, growth rates and an analysis of the industry key players and their market shares.
