Gas Pipeline Transportation in the US

Moving along

Demand for and supply of natural gas have been growing steadily during the past five years. The construction of new natural gas pipelines from the Marcellus Shale Basin has contributed to supplies and kept prices low. As demand for crude oil and coal falls in line with environmental concerns and high prices, consumers and businesses are increasingly moving toward natural gas. These trends will continue during the next five years, supporting revenue growth.

This industry transports natural gas by pipelines from processing plants to local distribution systems. This industry does not include the recovery of natural gas from wells or the processing of natural gas.

This report covers the scope, size, disposition and growth of the industry including the key sensitivities and success factors. Also included are five year industry forecasts, growth rates and an analysis of the industry key players and their market shares.
