Abstracts

Satellite Antenna is a device used to receive and transmit satellite signals, commonly used for satellite communications and broadcast reception. These antennas are usually made of metal and have a reflective surface (parabolic dish) that is used to focus microwave signals from or send signals to the satellite. Its working principle is to use the reflection characteristics of paraboloids to focus the microwave signals from the satellite onto the receiver, or to concentrate the signals from the transmitter to the satellite.

Satellite Antenna is generally divided into two types: receiving antenna and transmitting antenna. The receiving antenna is used to receive signals transmitted by satellites, such as television signals, Internet data, etc.; while the transmitting antenna is used to send signals to satellites, such as satellite phones, satellite Internet, etc.

The size and shape of the Satellite Antenna will vary depending on its use and environment. Some antennas used for home satellite television reception may be relatively small, while antennas used for large ground stations or mobile communications stations may be very large.

According to our (Global Info Research) latest study, the global Satellite Antenna market size was valued at US$ 2951 million in 2023 and is forecast to a readjusted size of USD 6735 million by 2030 with a CAGR of 12.2% during review period.

The core manufacturers in global Satellite Antenna market are Viasat, Honeywell Aerospace, Mitsubishi Electric Corporation, L3Harris and Communications & Power Industries (CPI), etc, accounting for 52% market share. Viasat is the world's largest Satellite Antenna manufacturer, occupying approximately 22% of the market share.
