Plastic Bottle Manufacturing in the US

In the clear

Modest improvements are set to occur for the industry over the next five years, as future demand for bottled beverages takes off. While the rising price of plastic will threaten manufacturers, improving economic conditions and some strategic mergers and acquisitions will result in a more favorable environment. However, increased competition from imports will have a negative effect on domestic operators, as manufacturers move more of their production facilities overseas to take advantage of low-cost labor.

This industry manufactures a range of bottles from different plastic compounds based on their end use. These bottles are then sold to beverage, food and chemical manufacturers for packaging soft drinks, milk, condiments and household and automotive chemicals. This industry does not manufacture reusable plastic bottles.

This report covers the scope, size, disposition and growth of the industry including the key sensitivities and success factors. Also included are five year industry forecasts, growth rates and an analysis of the industry key players and their market shares.
