End-stage renal disease (ESRD) is an irreversible loss of kidney function, which requires treatment with dialysis or transplantation. The treatment, through dialysis, includes artificial means for removal of toxins and excess fluids from the bloodstream.

The dialysis process is of two different types: Hemodialysis and Peritoneal Dialysis. The products used for Hemodialysis comprises hemodialysis machines, home-use machines, blood lines, dialyzers, catheter access, AV fistulae access, etc. The products used for Peritoneal dialysis comprises peritoneal dialysis machines and peritoneal transfer sets.

The number of Dialysis patients is growing in the US with the changing demographic patterns. According to the United States Renal Data System (USRDS) estimates, the prevalence of renal failure cases is high, especially in the developed countries. The main cause for this can be attributed to the dietary habits of the people. Moreover, the number of people willing to donate their kidneys for transplantation to the ESRD patients is very less. Thus, the Dialysis products market in the US is witnessing an increase in the number of patients suffering from chronic kidney failure.

The report by TechNavio Insights discusses the various aspects of the Dialysis products in the US. It forecasts the market size of the products used for Dialysis in the US over the period 2008-2012. Further, the report also provides segmentation of the Dialysis products in the US market. It also identifies the major market trends, drivers, and challenges existing for the Dialysis products in the US.

## Table of Content

### 1. INTRODUCTION
