According to our (Global Info Research) latest study, the global Anti Microbial Peptides market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Antimicrobial peptides (AMPs) are part of the innate immune response found among all classes of life. Fundamental differences exist between prokaryotic and eukaryotic cells that may represent targets for antimicrobial peptides. These peptides are potent, broad spectrum antibiotics which demonstrate potential as novel therapeutic agents. Antimicrobial peptides have been demonstrated to kill Gram negative and Gram positive bacteria, enveloped viruses, fungi and even transformed or cancerous cells. Unlike the majority of conventional antibiotics it appears that antimicrobial peptides frequently destabilize biological membranes, can form transmembrane channels, and may also have the ability to enhance immunity by functioning as immunomodulators.

Global anti-microbial peptides market is segmented on the basis of peptides types such as plant anti-microbial peptides, bacterial anti-microbial peptides, animal anti-microbial peptides, insect anti-microbial peptides. Among these segments, animal and plant anti-microbial peptides are capturing the major share into the market as they are easy to extract as compared with other anti-microbial peptides. Researchers are also more inclined towards animal and plant anti-microbial peptides to observe and check under clinical trials.

The Global Info Research report includes an overview of the development of the Anti Microbial Peptides industry chain, the market status of Personal Care and Cosmetics (Plant Anti-Microbial Peptides, Bacterial Anti-Microbial Peptides), Healthcare &
