Abstracts

An automotive active health monitoring system is an automotive technology, which monitors the health of the driver. The automotive active health monitor system is an in-vehicle health monitoring system, which measures and detects the driver's vital health parameters and biophysical attributes such as respiration rate, blood pressure, pulse, oxygen saturation, and other key health information. It also measures and senses consciousness and drowsiness of the driver while driving. The automotive active health monitoring system utilizes sensors and infrared cameras to detect and monitor human face expressions and health information.

Scope of the Report:

This report focuses on the Automotive Active Health Monitoring System in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

In terms of application, the pulse segment is expected to lead the automotive active health monitoring system market. Increase in pulse of the driver is likely to lead to accidents. This can be avoided through the integration of the automotive active health monitoring system, which monitors the heart rate of the driver and can instantly raise an alarm if the driver's pulse goes haywire. This, in turn, is projected to boost the pulse segment over the next couple of years.

The worldwide market for Automotive Active Health Monitoring System is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US$ in
