Global Server Virtualization Software Market 2008-2012

Infiniti Research

Date: Apr, 2009

Pages: 17

Price: US\$ 1,125.00

ID: S910AFB9954EN

Server Virtualization refers to the segregation of an existing physical server into multiple servers called virtual servers, using Virtualization software. In this process, the server's operating system is detached from its physical hardware, devising a "virtual machine". Each virtual machine is capable of running its own operating systems and applications to the extent that each virtual machine can be independently rebooted. Moreover, virtual machines with diverse operating systems can be run simultaneously on the same physical host server, sharing the same hardware resources.

Server Virtualization helps organizations reconfigure their IT environment, easily and rapidly (depending on the need of the business), besides speeding up and improving the underpinnings of their IT related infrastructure. Also, it helps in streamlining server management and security concerns and obtaining considerable improvements in the services offered. Implementation of new services and management of the already existing ones can also be improved using server virtualization, which helps in reducing the overall IT management cost for the organization. Further, server virtualization enables more workload per hardware required, thus requiring lesser number of servers and infrastructure to maintain the optimum temperature of server rooms. This significantly reduces the operating expenses of the company. Moreover, with the uncertainty in the global economy, companies desire to keep their operating expenses low.

In the recent years, there has been a significant increase in the number of providers of virtualization solutions. In order to sustain themselves, the new players are attracting key employees in this space from existing organizations.

The report by TechNavio Insights forecasts the size of the Global Server Virtualization Software Market over the period 2008-2012. It segments the market into three geographic regions: Americas, APAC, and EMEA, representing the market size and forecast for each of these regions. Further, it discusses the key market trends, drivers, and challenges of the Global Server Virtualization Software Market, and profiles some of the key vendors of this market.

Infiniti Research specializes in deep dive custom research for leading Fortune 500 companies. The company conducts more than 200 market intelligence projects every year. TechNavio is the company's market intelligence platform. TechNavio Insights is a series of 400+ reports based on this market intelligence platform.

Table of Content

1. INTRODUCTION

2. GLOBAL GPS MARKET SIZE & FORECAST

3. MARKET SEGMENTATION BY GEOGRAPHY

3.1 Revenue from GPS in Americas

3.2 Revenue from GPS in APAC

3.3 Revenue from GPS in EMEA

4. MARKET TRENDS

5. DRIVERS

6. CHALLENGES

7. MAJOR VENDOR PROFILE

- 7.1 Garmin International Inc.
- 7.2 TomTom International BV
- 7.3 Mio Technology Corporation
- 7.4 Magellan Navigation Inc.
- 7.5 Trimble Navigation Ltd.
