Abstracts

According to our (Global Info Research) latest study, the global CNC Hydraulic Steady Rest market size was valued at US$ 245 million in 2025 and is forecast to a readjusted size of US$ 344 million by 2032 with a CAGR of 5.0% during review period.

CNC Hydraulic Steady Rests are hydraulic work-support devices mounted on CNC lathes, turning centers, and shaft-machining equipment to support long, slender, heavy, or easily deflected rotating workpieces during turning, grinding, drilling, boring, and threading operations. They use hydraulic actuation to open, close, center, and apply support force through rollers or support arms. Compared with manual steady rests, CNC hydraulic steady rests provide faster clamping, better repeatability, easier automation, more stable support force, and improved suitability for batch shaft machining. This scope refers to hydraulic steady rest units for CNC machine tools, excluding manual steady rests, complete lathes, ordinary fixtures, and general hydraulic cylinders.The industrial chain of CNC Hydraulic Steady Rests includes upstream suppliers of alloy steel, castings, hydraulic cylinders, pistons, seals, rollers, precision bearings, guide blocks, springs, wear-resistant pads, hydraulic ports, sensors, mounting bases, surface coatings, heat-treatment services, grinding services, machined parts, and control components. The midstream consists of machine-tool accessory and workholding manufacturers that design and assemble steady rest bodies, hydraulic clamping structures, roller support systems, centering mechanisms, sealing systems, pressure interfaces, mounting adapters, and customized units for different lathe models. Downstream users include CNC lathe manufacturers, turning-center users, shaft processors, automotive parts factories, aerospace component suppliers, hydraulic cylinder producers, energy equipment manufacturers, roll-processing plants, bearing manufacturers, and general metalworking workshops. Supporting services cover

selection, installation, alignment, pressure adjustment, maintenance, roller replacement, repair, and application engineering.

Demand for CNC Hydraulic Steady Rests is being supported by the growth of shaft machining, heavy cylindrical part processing, automated turning, and higher accuracy requirements in metalworking. A major market trend is the shift from manual support devices toward hydraulic, repeatable, and machine-integrated work-support units that can reduce setup time and improve process stability. Opportunities are strongest in automotive parts, aerospace components, hydraulic cylinders, energy equipment, roll processing, bearing production, and heavy machinery manufacturing. The product is valuable because it helps reduce workpiece deflection, suppress vibration, improve surface finish, and stabilize machining quality for long or flexible parts. Key challenges include machine-interface compatibility, support-force adjustment, roller wear, alignment accuracy, hydraulic sealing reliability, maintenance requirements, and the need to customize mounting dimensions for different lathe models.In 2025, global CNC Hydraulic Steady Rest production reached approximately 31.32 thousand units, with an average global market price of around US$7,600 per unit. The gross profit margin of major companies in the industry ranged from 29% to 45%. In 2025, the global production capacity of CNC Hydraulic Steady Rests was approximately 41.75 thousand units.

Report Scope

This report is a detailed and comprehensive analysis for global CNC Hydraulic Steady Rest market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application. As the market is constantly changing, this report explores the competition, supply and demand trends, as well as key factors that contribute to its changing demands across many markets. Company profiles and product examples of selected competitors, along with market share estimates of some of the selected leaders for the year 2025, are provided.

Key Features:

Global CNC Hydraulic Steady Rest market size and forecasts, in consumption value ($ Million), sales quantity (Units), and average selling prices (K US$/Unit), 2021-2032

Global CNC Hydraulic Steady Rest market size and forecasts by region and country, in consumption value ($ Million), sales quantity (Units), and average selling prices (K US$/Unit), 2021-2032

Global CNC Hydraulic Steady Rest market size and forecasts, by Type and by Application, in consumption value ($ Million), sales quantity (Units), and average selling prices (K US$/Unit), 2021-2032

Global CNC Hydraulic Steady Rest market shares of main players, shipments in revenue ($ Million), sales quantity (Units), and ASP (K US$/Unit), 2021-2026

The Primary Objectives in This Report Are:

To determine the size of the total market opportunity of global and key countries

To assess the growth potential for CNC Hydraulic Steady Rest

To forecast future growth in each product and end-use market

To assess competitive factors affecting the marketplace

This report profiles key players in the global CNC Hydraulic Steady Rest market based on the following parameters - company overview, sales quantity, revenue, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include AUTOBLOK S.p.A., SCHUNK SE & Co. KG, R?HM GmbH, Atling Steady Rest AB, ?zcan CNC Makine, Fenwick And Ravi, Tuskar Manufacturing Solutions Pvt. Ltd., Sajraj Technologies, New Karwal Engineering Works (Regd.), Arobotech Systems, Inc., etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

CNC Hydraulic Steady Rest market is split by Type and by Application. For the period 2021-2032, the growth among segments provides accurate calculations and forecasts for consumption value by Type, and by Application in terms of volume and value. This analysis can help you expand your business by targeting qualified niche markets.
