According to our (Global Info Research) latest study, the global Ethernet Switching market size was valued at USD 2993.8 million in 2023 and is forecast to a readjusted size of USD 3479.4 million by 2030 with a CAGR of 2.2% during review period.

Ethernet switch refers to a “central hub” wired to every computer and network device in an Ethernet. In home and small office setting, an ethernet switch is built into the router. A basic ‘unmanaged’ Ethernet switch has no user configuration. It is placed in the network – the cables are plugged in and the unit is turned on which means there is nothing else to do. In contrast, for large company networks, a ‘managed’ switch can be configured to adjust speeds, combine users in subgroups, monitor traffic and report network activity.

Geographically, it is North America and Europe that forms the major markets for the ethernet switches market globally. Growing application along with rise in demand for quick transmission of data forms some of the major drivers that boosts the demand for ethernet switches in this region. Asia Pacific forms another major region that contributes to the growth of ethernet switches market with China, Japan and India being some of the major regions that boosts the demand. Growing internet penetration along with rising application of data transmission has been some of the crucial factors that has positively impacted the demand for ethernet switches market in this region.

The Global Info Research report includes an overview of the development of the Ethernet Switching industry chain, the market status of Residential Use (Fixed Managed, Fixed Unmanaged), Office/Commercial Use (Fixed Managed, Fixed Unmanaged), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Ethernet
