Abstracts

Influenza vaccines, also known as flu shots, are vaccines that protect against influenza. A new version of the vaccine is developed twice a year as the influenza virus rapidly changes. Most provide modest to high protection against influenza; however, each year this varies. Evidence in adults over 65 years old is poor. They decrease the number of missed days of work by a half day on average. Vaccinating children may protect those around them.

According to our (Global Info Research) latest study, the global Flu Vaccine market size was valued at US$ 8777 million in 2023 and is forecast to a readjusted size of USD 12640 million by 2030 with a CAGR of 5.4% during review period.
