Abstracts

According to our (Global Info Research) latest study, the global Government Cyber Security market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Cyber threats are Internet-based attempts to disrupt or damage information systems and hack critical information using spyware, malware, and phishing. Cyber security solutions enable the US government to maintain data confidentiality by monitoring, detecting, reporting, and countering cyber threats. The adoption of cyber security solutions is expected to increase with the growing penetration of the Internet among organizations of the US government.

The adoption of the hybrid deployment model for cyber solutions will be one of the major factors that will have a positive impact on the growth of the market. This model helps to overcome the issues that are prevalent in traditional deployment models. The adoption of hybrid deployment model lowers the total cost of ownership by ensuring the on-premises data protection without the need for skilled workers. Also, hybrid cyber security solutions are less expensive than the traditional full license security solutions because they follow the pay-per-use model. The demand for hybrid deployment models in various industries is increasing due to its ease of installation and upgrades, which in turn, will encourage emerging vendors to come up with hybrid cloud-based security solutions.
