electronic components may constrain market growth, particularly in cost-sensitive regions. However, rising electric-vehicle production, lightweight vehicle designs, and advancements in window-regulator technology are creating significant growth opportunities. Automakers and suppliers are focusing on developing compact, lightweight, durable, and energy-efficient regulators to reduce vehicle weight and improve overall vehicle efficiency. Furthermore, the expansion of the automotive aftermarket in developing economies is increasing demand for replacement window regulators as the global vehicle parc continues to grow. The integration of window regulators with smart door systems and other electronically controlled vehicle functions is expected to further support market expansion during the forecast period.
