Abstracts

The global car sharing market size was valued at USD 12.0 billion in 2025 and is projected to grow from USD 14.2 billion in 2026 to USD 46.5 billion by 2033, at a CAGR of 18.5% from 2026 to 2033. North America dominated the market, accounting for a revenue share of 30.3% in 2025. Consumers are increasingly moving beyond traditional hourly or daily car sharing toward monthly subscriptions, prepaid packages, and longer-duration vehicle access, offering greater flexibility without the financial commitment of ownership.

The rapid urbanization and rising population density in major cities are driving demand for flexible, cost-effective mobility solutions such as car sharing. Rising vehicle purchase prices, insurance, fuel, maintenance, and parking expenses are making private vehicle ownership less attractive, particularly among younger urban consumers. Car-sharing services provide access to vehicles without the long-term financial commitment associated with ownership. Parking constraints and congestion in densely populated cities further strengthen the value proposition of shared vehicles. Moreover, research indicates that car-sharing households can have lower vehicle ownership than comparable households, supporting continued adoption of shared mobility models.

The increasing smartphone penetration, digital payments, connected vehicles, and mobile applications are significantly supporting the expansion of the market. Digital platforms allow consumers to locate vehicles, make reservations, authenticate themselves, unlock vehicles, complete payments, and manage trips through a single

interface. This reduces booking friction and makes one-way, round-trip, and peer-to-peer car sharing more accessible to consumers. Integration with Mobility-as-a-Service platforms can further connect car sharing with public transportation and other mobility options. The International Transport Forum highlights ease of use, including payment and software interfaces, as an important factor influencing shared-mobility uptake.

Furthermore, the growing environmental concerns and efforts to reduce transportation-related emissions are encouraging governments, mobility providers, and consumers to adopt shared and electric mobility solutions. Car-sharing fleets can improve vehicle utilization while potentially reducing dependence on privately owned vehicles and the urban space required for parking. Operators are also increasingly able to incorporate BEVs and PHEVs into shared fleets, supporting the transition toward lower-emission transportation. The International Transport Forum notes that car-sharing systems using low- and zero-emission vehicles have broader public exposure. Supportive policies, the development of charging infrastructure, and corporate sustainability initiatives are expected to further strengthen this driver.

Global Car Sharing Market Report Segmentation

This report forecasts revenue growth at global, regional, and country levels and provides an analysis of the latest industry trends in each of the sub-segments from 2021 to 2033. For this study, Grand View Research has segmented the global car sharing market report based on booking mode, fuel, vehicle, application, type, and region.
