## Abstracts

According to our (Global Info Research) latest study, the global High Throughput Satellite Communication market size was valued at US$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

High-throughput Satellite or HTS is a communication satellite that provides more throughput than conventional communication satellites (Fixed Satellite Service). Higher-throughput refers to a significant increase in capacity when using the same amount of orbital spectrum. The increase in capacity typically ranges from 2 to more than 100 times as much capacity as the classic FSS (Fixed Satellite Service). This significantly reduces the cost per bit.

The Global Mobile Economy Development Report 2023 released by GSMA Intelligence pointed out that by the end of 2022, the number of global mobile users would exceed 5.4 billion. The mobile ecosystem supports 16 million jobs directly and 12 million jobs indirectly.

According to our Communications Research Centre, in 2022, the global communication equipment was valued at US$ 100 billion. The U.S. and China are powerhouses in the manufacture of communications equipment. According to data from the Ministry of Industry and Information Technology of China, the cumulative revenue of telecommunications services in 2022 was ?1.58 trillion, an increase of 8% over the previous year. The total amount of telecommunications business calculated at the price of the previous year reached ?1.75 trillion, a year-on-year increase of 21.3%. In the same year, the fixed Internet broadband access business revenue was ?240.2 billion, an increase of 7.1% over the previous year, and its proportion in the
