Abstracts

The global document AI market size was valued at USD 14.7 billion in 2025 and is projected to grow from USD 16.6 billion in 2026 to USD 44.8 billion by 2033, at a CAGR of 15.2% from 2026 to 2033. North America dominated the market, accounting for a revenue share of 33.2% in 2025. The rising adoption of AI-powered document processing and data extraction, increasing enterprise demand for automated document classification and workflow optimization, growing integration of generative AI and machine learning into document management systems, expanding digital transformation initiatives across BFSI healthcare and government sectors, increasing regulatory compliance and data accuracy requirements driving investment in intelligent document automation.

Agentic AI is emerging as a key trend as enterprises move from automated document extraction toward systems capable of executing multi-step document-related workflows. These systems can classify incoming documents, extract information, validate records, identify missing information, and route cases to appropriate teams or applications. Organizations are exploring agentic workflows for insurance claims, loan processing, contract management, and regulatory documentation to reduce processing delays. Integration with enterprise applications enables AI agents to initiate follow-up actions and coordinate tasks across existing business systems. This development is increasing demand for Document AI platforms that combine autonomous workflow execution with human oversight, audit trails, and controlled decision-making.

Enterprises are prioritizing secure Document AI deployments as automated systems increasingly process confidential financial records, healthcare information, legal documents, and personally identifiable information. Organizations are implementing access controls, encryption, audit trails, data residency measures, and human-review mechanisms to manage the risks associated with AI-driven document processing. Privacy-preserving approaches, including federated learning and region-specific deployment architectures, are gaining attention where sensitive information cannot be freely transferred across systems or jurisdictions. Businesses are also emphasizing explainability, data lineage, and output validation to improve accountability and support regulatory audits. These requirements are increasing demand for enterprise-grade Document AI platforms that balance automation efficiency with security, transparency, and compliance.

Retrieval-augmented generation (RAG) is gaining traction as organizations connect Document AI platforms with internal repositories, knowledge bases, and enterprise content management systems. This approach enables AI models to retrieve relevant information from approved documents before generating summaries, answering questions, or preparing business reports. Enterprises are applying RAG to contract analysis, policy interpretation, compliance reviews, technical support, and internal knowledge discovery. Integration with customer relationship management, enterprise resource planning, and workflow platforms is further enabling document-derived information to support operational decisions. This trend is driving demand for document AI solutions that convert fragmented enterprise documents into searchable, contextualized, and actionable business knowledge.

Global Document AI Market Report Segmentation

This report forecasts revenue growth at global, regional, and country levels and provides an analysis of the latest industry trends in each of the sub-segments from 2021 to 2033. For this study, Grand View Research has segmented the global document AI market report based on offering, document type, application, end use, and region.
