Abstracts

The global industrial computed tomography market size was valued at USD 812.1 million in 2025 and is projected to grow from USD 873.2 million in 2026 to USD 1,450.1 million in 2033, at a CAGR of 7.6% from 2026 to 2033. Asia Pacific dominated with a revenue share of over 33.5% in 2025. The increasing use of additive manufacturing techniques in production processes across industries such as automotive, aerospace, defense, and electronics has contributed to market growth. Additive manufacturing, also known as 3D printing, involves the production of complex designs and structures that are expensive and difficult to produce using traditional manufacturing methods.

These structures are made by depositing material layer upon layer, creating a single-piece structure. Hence, industrial CT scanners test the strength and capabilities of the structures/designs formed using the additive manufacturing process. These scanners help the manufacturers to test & evaluate the capabilities/characteristics of the complex structures without damaging the product.

The benefits of industrial computed tomography, including the precise scanning of micro and large parts of the structure, enable the manufacturer to reduce the product development cost. Also, various types of inspection capabilities offered by this scanning technology, such as failure analysis, flaw detection, assembly analysis, and others, help improve the overall product quality, thereby reducing the product recall risk. Therefore, the pre-and post-production benefits computed tomography offers for the industrial sector are anticipated to bolster market growth in the coming years.

The increasing demand for high precision and reliability requirements for evaluating complex parts at high temperatures has pushed the aerospace computed tomography business forward. Computed tomography can also be used to inspect tiny and moderate components such as welded tubes, aluminum castings, turbine blades, and others. Furthermore, the industrial computed tomography market is being driven by the high adoption of techniques in the aerospace sector.
