Abstracts

According to our (Global Info Research) latest study, the global Industrial WLAN market size was valued at USD 219.5 million in 2023 and is forecast to a readjusted size of USD 276.4 million by 2030 with a CAGR of 3.3% during review period.

A wireless local area network (WLAN) is a wireless computer network that links two or more devices using wireless communicationwithin a limited area such as a home, school, computer laboratory, or office building. This gives users the ability to move around within a local coverage area and yet still be connected to the network. Through a gateway, a WLAN can also provide a connection to the wider Internet.

Wireless LANs have a great deal of applications. Modern implementations of WLANs range from small in-home networks to large, campus-sized ones to completely mobile networks on airplanes and trains. Users can access the Internet from WLAN hotspots in restaurants, hotels, and now with portable devices that connect to 3G or 4G networks.

The Global Info Research report includes an overview of the development of the Industrial WLAN industry chain, the market status of Water and Wastewater Industry (IEEE 802.11 ac, IEEE 802.11 n), Power Industry (IEEE 802.11 ac, IEEE 802.11 n), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Industrial WLAN.

Regionally, the report analyzes the Industrial WLAN markets in key regions. North America and Europe are experiencing steady growth, driven by government initiatives and increasing consumer awareness. Asia-Pacific, particularly China, leads the global Industrial WLAN market, with robust domestic demand, supportive policies, and a strong manufacturing base.
