Abstracts

According to our (Global Info Research) latest study, the global Inkjet Packaging and Labeling market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Most inkjet label printing is on narrow web presses, printing high-quality, self-adhesive prime labels. The acceptance of UV inkjet systems has grown in 2014 and 2015, as quality and reliability has improved, with higher productivity than competing toner-based systems.

In inkjet, there is a significant amount of wide-format print and cut, while there is some proofing and prototyping. There is overprinting by inkjet and mono electrophotography. Additionally there is a small proportion printed on low-cost laser toner systems, including some cut-sheet on pre-diecut stocks. Wide-format inkjet is used to print very large labels that do not fit on narrow web presses, or to print metallic or fluorescent inks. While not a very high productivity solution, a low-cost wide-format printer can provide great flexibility to deliver small quantities very quickly.

The Global Info Research report includes an overview of the development of the Inkjet Packaging and Labeling industry chain, the market status of Packaging (Wide-format Inkjet, Narrow-web Inkjet), Paper Media (Wide-format Inkjet, Narrow-web Inkjet), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Inkjet Packaging and Labeling.
