Abstracts

The Global Dental Turbine Market size is expected to reach $325.9 Million by 2026, rising at a market growth of 24.4% CAGR during the forecast period. Dental turbines are a medical instrument that is made by joining precision parts. These parts move in a much-synchronized fashion and at high speed in order to perform dental procedures. Dental turbines are useful in the removal of dental decay and remodel a tooth before the addition of filling or crown. They are also used to shape or clean the root canal at the time of endodontic procedures. Dental drills rotate at speeds of about 100,000 rpm to 400,000 rpm. The bits of metal alloy used in dental turbines called burrs. These are made from steel which is coated with either diamond or tungsten carbide.

The growth of the global market of the Dental Turbine Market can be accredited to the growing demand for not only dental procedures like restorative and orthodontics but also for cosmetic dentistry. The dental turbine market is also positively impacted by the technological innovations in dental turbine handpieces, rising awareness for oral health, and the increase in the occurrence of dental diseases. Cavities in permanent teeth are one of the most common problems that frequently occur. The high incidence of tooth decay is projected to boost the growth of the dental turbines market.

According to a report by the U.S. Center for Disease Control and Prevention (CDC) about 84.9% of children of 2-17 years of age, 64.0% of adults, and 65.6% of aged people above 65 years and above had gone to see a dentist in the year 2017. Some most commonly carried out dental procedures comprise bonding, implants, dental crowns, dental fillings, canalling, periodontal treatments, dental bridges, and maxillofacial procedures. Therefore, the higher demand for dental treatments is estimated to boost the growth of the dental turbine market.

Moreover, as per the survey that is steered by the American Academy of Cosmetic Dentistry in the year 2017, approximately 99.7% of adults consider that smile is an essential social asset. While approximately 74.0% of adults have the impression that an unattractive smile can negatively impact the career success of a person. These factors have resulted in more and more adoption of beautification and restorative procedures by the people. This, in turn, will probably drive the cosmetic dentistry market in the coming years and thus it also favours the market growth for dental turbines.

Based on Speed, the market is segmented into High and Low. Based on End Use, the market is segmented into Dental Office and Hospital. Based on Regions, the market is segmented into North America, Europe, Asia Pacific, and Latin America, Middle East & Africa.

The market research report covers the analysis of key stake holders of the market. Key companies profiled in the report include Danaher Corporation, A-dec, Inc., Dentsply Sirona, Inc., Cefla S.C., Dentamerica, Inc., Dentflex, DentalEZ, Inc. JEP Management, Inc.), The Yoshida Dental Mfg. Co., Ltd., Guilin Woodpecker Medical Instrument Co., Ltd. and The Turbine Source (Sed, Inc.).
