About Zirconium and Hafnium Market

The mineral zircon (zirconium silicate) is the principal zirconium commodity. Due to its very high melting temperature and chemical stability, it is used as a refractory in furnace and ladle linings, foundry sands and ceramic manufacture. Zirconium metal manufacture is a very small part of total output.

Zircon is recovered from heavy mineral sands, typically as a co-product with titanium minerals, and the relative rarity of large deposits restricts. Hafnium occurs with zirconium in the minerals zircon and baddeleyite.

Australia is a world leader in zirconium production; its market share constitutes over 40% of total output. South Africa holds second position supplying 32% of market.
