Abstracts

A Maglev rotation system utilizes magnetic levitation to rotate an object without physical contact. This system typically consists of two main components: a stationary base and a rotating element. The stationary base contains electromagnets or permanent magnets arranged in a specific configuration to create a magnetic field. The rotating element, often a rotor or a disk, is equipped with magnets that interact with the magnetic field generated by the base.

According to our (Global Info Research) latest study, the global Maglev Rotation System market size was valued at US$ 44.2 million in 2023 and is forecast to a readjusted size of USD 113 million by 2030 with a CAGR of 11.9% during review period.
