According to our (Global Info Research) latest study, the global MEMS Infrared Thermopile Sensors market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

MEMS Infrared Thermopile Sensors are miniaturized sensors that utilize Micro-Electro-Mechanical Systems (MEMS) technology to detect infrared radiation and convert it into electrical signals. They consist of an array of tiny thermopile elements, which are thermocouples made of different metallic materials. Each thermopile element generates a voltage proportional to the temperature difference between the two junctions, resulting from the absorption of infrared radiation.
