Abstracts

MIM (metal injection molding) is a metalworking process by which finely-powdered metal is mixed with a measured amount of binder material to comprise a "feedstock" capable of being handled by plastic processing equipment through a process known as injection molding. Sintering is the process of compacting and forming a solid mass of material by heat or pressure without melting it to the point of liquefaction. MIM (metal injection molding) requires the use of MIM (Metal Injection Molding) furnace to complete the sintering process.
