Abstracts

The global Mobile Exoskeletons market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Lower extremity exoskeletons developed for human locomotion assistance are used to help patients who have completely lost mobility in the lower limbs due to conditions such as SCI, multiple sclerosis, etc. These systems offer external torque at the location of human joints to replace the patients' impaired motor function, enabling them to perform daily movements such as standing up, sitting down and walking.They can function as assistive and rehabilitative devices. Most of these exoskeletons require the patients to balance themselves and therefore a healthy upper body is required. Compared to stationary systems, powered robotic exoskeletons are compact, lightweight and portable and can therefore be potentially used at home.

This report studies the global Mobile Exoskeletons production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Mobile Exoskeletons, and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year. This report explores demand trends and competition, as well as details the characteristics of Mobile Exoskeletons that contribute to its increasing demand across many markets.
