Why we write this report?

China's economy has achieved a stable development in the recent years, even under the global economy depressed. At present, China has already become one of the potential consumption markets for the footwear manufacturer. However, foreign enterprises often find it is difficult to formulate their entry strategy in Chinese footwear markets based on their past experiences in the face of special local market

environment. In addition, Chinese government has been consciously guiding the transformation of China from the “world production center” into a combination of “production center” and “demand center”. Thus, to learn about the actual local market environment in China, has become a compulsory course for enterprises to exploit the footwear market in China.
