Abstracts

The global Preformed Dead-end Fittings market size is expected to reach $ 636 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

Preformed dead-end fittings are helical tension and anchoring assemblies made from preformed rods, inner protective rods, structural reinforcing rods and associated connection hardware. They grip conductors, earth wires, OPGW, ADSS or OPPC cables by wrapping around the cable surface and distribute mechanical load over a longer contact length. They are installed at dead-end towers, angle towers, terminal structures and long-span sections to transfer tensile load into insulator strings and tower structures while reducing localized crushing, sheath damage, abrasion and stress concentration. Key upstream materials include aluminum-clad steel wire, galvanized steel wire, aluminum-alloy wire, stainless steel, ductile iron, zinc-aluminum anti-corrosion coatings, elastomeric inserts and high-strength fasteners. Main downstream applications include HV/EHV transmission lines, OPGW/ADSS utility communication routes, renewable-energy export lines, overhead insulated distribution lines, grid refurbishment and disaster-recovery projects.

In 2025, global preformed dead-end fittings production reached approximately 6 million units, with an average global market price is $70 per unit.
