# Global SAP Absorbent Paper for Hygiene Products Supply, Demand and Key Producers, 2026-2032

https://marketpublishers.com/r/G683DD6906D3EN.html
Date: November 2026
Pages: 146
Price: US$ 4,480.00 (Single User License)
ID: G683DD6906D3EN

## Abstracts

The global SAP Absorbent Paper for Hygiene Products market size is expected to reach $ 1621 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

SAP Absorbent Paper for Hygiene Products is a preformed absorbent core material in which superabsorbent polymer is incorporated, distributed or fixed within cellulose fibers, airlaid substrates, tissue, nonwoven layers or other fibrous carriers to provide rapid liquid acquisition, high liquid retention and dimensional stability for disposable absorbent hygiene products. Commercial products are generally supplied as rolls, laminated sheets or preformed core materials and are manufactured through airlaid forming, wet-laid papermaking or multilayer lamination processes. Typical basis weights range from below 150 gsm to more than 300 gsm, depending on SAP loading, fiber composition, absorbency requirements and downstream converting specifications. The material is primarily used in feminine hygiene pads, baby diapers, training pants, adult diapers, incontinence pads and underpads. Product development increasingly emphasizes thinner core construction, higher SAP utilization, lower fluff pulp consumption, improved liquid distribution, reduced rewet and compatibility with high-speed converting lines.

## Key Findings

Global sales volume reached approximately 400,000 tons in 2025

Global sales volume is estimated at approximately 425,000 tons in 2026

+357 96 030922
info@marketpublishers.com

Weighted average selling prices are approximately US$2.64 per kg in 2025 and US$2.62 per kg in 2026

Asia represents the principal manufacturing base for SAP absorbent paper and composite hygiene cores

Merchant suppliers coexist with captive material production inside integrated hygiene product groups

Market Trends

The SAP Absorbent Paper for Hygiene Products industry is moving toward thinner, higher-performance and more structurally integrated absorbent cores. Traditional fluff-pulp-heavy structures are increasingly supplemented or partially replaced by airlaid, wet-laid and laminated SAP-rich materials that can deliver higher absorbency per unit thickness and improve product softness and fit. Hygiene product manufacturers are also placing greater emphasis on controlled SAP distribution, liquid acquisition speed, rewet performance and core integrity under pressure. This is encouraging suppliers to optimize fiber selection, SAP fixation and multilayer configurations rather than simply increasing polymer content. At the same time, high-speed converting requirements are increasing demand for stable roll quality, tighter basis-weight tolerance and more consistent slit widths. Sustainability considerations are also shaping material development, particularly through lower fluff pulp consumption, lightweighting, reduced packaging volume and selected bio-based or lower-impact absorbent structures.

## Market Dynamics

### Drivers

Growth is primarily supported by continued expansion of disposable absorbent hygiene products, particularly baby care, adult incontinence and feminine hygiene products in Asia and other developing markets. Greater penetration of ultra-thin hygiene products is increasing the use of preformed SAP-rich cores because they can provide high liquid retention while reducing bulk. Population aging is also strengthening demand for adult incontinence products, while improving household incomes and hygiene awareness support product penetration in emerging markets. From the manufacturing side, investment in new wet-laid, airlaid and laminated core capacity, especially in China and other Asian countries, is expanding supply availability and accelerating adoption by

+357 96 030922
info@marketpublishers.com

regional converters.

## Restraints

The principal restraint is cost sensitivity across the hygiene products supply chain. SAP, pulp, tissue, nonwoven materials, adhesives and energy all influence the manufacturing cost of absorbent paper, while downstream customers frequently operate in highly price-competitive consumer markets. Higher SAP loading can improve absorbency but also increases material cost and may complicate liquid distribution if core design is not optimized. In addition, conventional fluff pulp and direct SAP dosing on hygiene converting lines remain viable alternatives for many manufacturers, limiting the addressable market for externally purchased preformed absorbent cores. Periodic excess capacity in Asia may also constrain supplier pricing and margins.

## Opportunities

The largest opportunities are associated with the transition from bulky conventional cores toward thinner and more engineered absorbent structures. Adult incontinence products offer attractive expansion potential because they generally require higher absorbency and reliable performance under pressure, while emerging-market diaper and feminine hygiene penetration continues to create additional material demand. Suppliers capable of providing customized basis weight, SAP loading, multilayer structure, roll width and liquid-management performance can participate more deeply in customer product development. Wet-laid SAPP structures, high-SAP airlaid products and laminated composite cores also provide opportunities to reduce fluff pulp usage and support thinner product formats.

## Challenges

The industry faces persistent challenges in product standardization and performance comparison because suppliers use different fiber systems, SAP grades, layer structures, test liquids and absorbency evaluation methods. A nominally similar basis weight therefore does not necessarily imply equivalent acquisition speed, retention capacity or rewet performance. Another challenge is distinguishing independent merchant demand from captive production within vertically integrated hygiene groups, which can affect competitive benchmarking and capacity utilization analysis. Suppliers must also maintain consistent SAP distribution and core integrity at high production

+357 96 030922
info@marketpublishers.com

speeds while managing raw-material volatility and increasingly stringent customer specifications.

## Industry Chain Analysis

The upstream industry consists primarily of superabsorbent polymer, fluff pulp, cellulose pulp, tissue, airlaid fibers, nonwoven substrates, adhesives and selected functional additives. SAP is the critical functional component for liquid retention, while pulp and fibrous carriers determine liquid transport, structural integrity and processability. Cost competitiveness therefore depends not only on polymer prices but also on fiber mix, SAP loading efficiency, energy use and production yield. In the midstream, manufacturers use airlaid forming, wet-laid papermaking or multilayer lamination to convert these raw materials into SAP absorbent paper and composite cores with controlled basis weight, thickness, absorbency and roll specifications.

Downstream customers are hygiene product converters and vertically integrated manufacturers producing feminine hygiene pads, baby diapers, training pants, adult diapers, incontinence pads and underpads. Value creation increases as suppliers move from commodity absorbent substrates toward engineered cores with customized liquid-management performance and higher converting compatibility. Standard materials compete mainly on cost, scale and delivery stability, while differentiated products compete through thinness, SAP utilization, structural stability and application-specific performance.

Segment Insights

By product type, airlaid-formed SAP absorbent paper and laminated SAP composite paper represent the most broadly commercialized structures, while wet-laid SAP absorbent paper has developed more visibly in China as manufacturers pursue thinner, highly integrated cores. Airlaid products benefit from flexible incorporation of cellulose fibers and SAP, whereas laminated structures allow suppliers to combine nonwoven, tissue, airlaid paper and SAP layers into purpose-designed cores. Wet-laid technology provides another route to achieving thin, relatively uniform paper-like absorbent structures. Across these technologies, the competitive focus is increasingly shifting from simple basis weight toward absorbency per unit thickness, SAP distribution uniformity and liquid-management performance.

By basis weight, products up to 150 gsm are generally associated with lightweight and

+357 96 030922
info@marketpublishers.com

thinner constructions, the 150 to 300 gsm range covers a broad group of mainstream hygiene applications, and products above 300 gsm are more frequently used where higher absorbent capacity or stronger structural requirements are needed. However, basis weight alone does not determine performance because SAP ratio, fiber composition, density and layer architecture can materially change absorption behavior.

Downstream Market Opportunities

Feminine hygiene pads remain an important application for thin SAP-rich absorbent structures, particularly in products emphasizing discretion and reduced thickness. Baby diapers provide large-volume demand and increasingly require thinner cores with good acquisition and leakage control, while training pants benefit from flexible and dimensionally stable core materials. Adult diapers and incontinence pads offer particularly attractive structural demand because aging populations and higher product penetration support long-term volume growth, and these applications often require greater liquid retention and performance under load. Underpads provide an additional opportunity for higher-capacity absorbent materials used in institutional, home-care and medical-support environments.

## Regional Insights

Asia is the principal manufacturing and demand center for SAP Absorbent Paper for Hygiene Products, supported by a dense hygiene products supply chain and significant production capacity in China, Japan, South Korea, Taiwan, India and Indonesia. China has developed a particularly broad supplier base covering laminated SAP cores, wet-laid SAPP materials and airlaid-related absorbent structures, with both independent merchant producers and vertically integrated hygiene groups investing in capacity. Japan and Taiwan retain strengths in higher-specification airlaid and engineered absorbent materials, while South Korea, India and Indonesia have established regional manufacturing capabilities serving domestic and export hygiene markets.

Europe and North America remain important technology and premium-product markets, with established airlaid and superabsorbent laminate suppliers emphasizing high-performance cores, product consistency and specialty applications. Compared with Asia, these markets generally have a more mature hygiene demand profile, but adult incontinence, premium feminine care and advanced thin-core structures continue to support product upgrading. Regional competition is therefore increasingly differentiated between Asian scale and cost advantages and European, North American and

+357 96 030922
info@marketpublishers.com

Japanese strengths in engineered materials, specialty performance and application development.

## Competitive Landscape Analysis

The competitive landscape combines global airlaid specialists, regional SAP core manufacturers and vertically integrated hygiene groups. International suppliers such as EAM Corporation, Gelok International, McAirlaid's Vliesstoffe GmbH, MAGIC Spa, MAIN S.p.A., M&J Airlaid Products A/S, Airlaid ApS, Fitesa, OJI KINOCLOTH CO.,LTD, WANGBO COMPANY, PT Multi Spunindo Jaya Tbk, Ace Nonwoven Pvt. Ltd. and KNH Enterprise Co., Ltd. compete through airlaid technology, superabsorbent laminates, application engineering and customer-specific material design. Chinese producers including Fujian Province Qiao Dong New Materials, Guangdong Meideng New Material Technology, Fujian Tengbang New Materials, Longyou Jieli New Material Technology, Nuochen and Quanzhou Lifu New Materials Technology have strengthened their position through capacity expansion, laminated core development and wet-laid SAPP technology. Competitive differentiation is increasingly determined by stable SAP distribution, basis-weight consistency, thin-core performance, customization capability, production scale and the ability to support high-speed hygiene converting lines rather than by material price alone.

## Report Scope

This report studies the global SAP Absorbent Paper for Hygiene Products production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for SAP Absorbent Paper for Hygiene Products and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of SAP Absorbent Paper for Hygiene Products that contribute to its increasing demand across many markets.

## Highlights and key features of the study

Global SAP Absorbent Paper for Hygiene Products total production and

+357 96 030922
info@marketpublishers.com

demand, 2021-2032, (Tons)

Global SAP Absorbent Paper for Hygiene Products total production value, 2021-2032, (USD Million)

Global SAP Absorbent Paper for Hygiene Products production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (Tons), (based on production site)

Global SAP Absorbent Paper for Hygiene Products consumption by region & country, CAGR, 2021-2032 & (Tons)

U.S. VS China: SAP Absorbent Paper for Hygiene Products domestic production, consumption, key domestic manufacturers and share

Global SAP Absorbent Paper for Hygiene Products production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (Tons)

Global SAP Absorbent Paper for Hygiene Products production by Type, production, value, CAGR, 2021-2032, (USD Million) & (Tons)

Global SAP Absorbent Paper for Hygiene Products production by Application, production, value, CAGR, 2021-2032, (USD Million) & (Tons)

This report profiles key players in the global SAP Absorbent Paper for Hygiene Products market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include EAM Corporation, Gelok International, McAirlaid's Vliesstoffe GmbH, MAGIC Spa, MAIN S.p.A., M&J Airlaid Products A/S, Airlaid ApS, Fitesa, OJI KINOCLOTH CO.,LTD, WANGBO COMPANY, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World SAP Absorbent Paper for Hygiene Products market

## Detailed Segmentation:

Each section contains quantitative market data including market by value (US$ Millions), volume (production, consumption) & (Tons) and average price (US$/kg) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
