The global Ferro Molybdenum Powder market size is predicted to grow from US$ 168 million in 2025 to US$ 219 million in 2031; it is expected to grow at a CAGR of 4.5% from 2025 to 2031.

Ferro molybdenum powder is an alloy of iron and molybdenum, typically containing 60-75% molybdenum. It's produced by reducing molybdenum oxide with iron in an electric arc furnace or by aluminothermic reaction. The resulting alloy is then crushed and milled into a fine powder. This powder is primarily used as an additive in steelmaking to improve the steel's hardenability, strength, toughness, and corrosion resistance. It is crucial for producing high-strength low-alloy steels, stainless steels, and tool steels. The fine powder form allows for precise control of molybdenum content in the final steel product.

The ferro molybdenum powder industry is influenced by global steel demand and technological advancements. Upstream, there's a focus on optimizing production processes for higher purity and reduced environmental impact. Downstream, the automotive, aerospace, and construction industries drive demand for high-strength steels containing ferro molybdenum. Product specifications are increasingly demanding finer particle sizes and consistent chemical compositions. The future market size is projected to grow, driven by increasing infrastructure development and the need for advanced materials in emerging technologies. The trend is towards sustainable production and tailored powder specifications to meet specific application requirements.
