The global Biodegradable Micro Screws market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Biodegradable microscrews are medical devices used in fracture repair and bone implant surgeries. Unlike traditional metal screws, biodegradable micro-screws are made of biodegradable materials and can be gradually degraded and absorbed in the body within a certain period of time without the need for re-operation to remove them. This device is used during orthopedic surgery to stabilize fracture ends, promote bone healing, and gradually disappears after healing, thereby reducing patient discomfort and risk of complications. With the development of digital technology, more customized biodegradable microscrew designs may appear to meet the needs of different patients.
