According to our (Global Info Research) latest study, the global Stablecoin Infrastructure Software market size was valued at US$ 440 million in 2025 and is forecast to a readjusted size of US$ 710 million by 2032 with a CAGR of 7.1% during review period.

Stablecoin infrastructure software enables organizations to create, manage, distribute, and integrate stablecoins, a type of cryptocurrency, into financial and blockchain ecosystems. While stablecoin infrastructure software shares features of other cryptocurrency software, including cryptocurrency mining software and cryptocurrency payment gateways, it significantly differs. Stablecoins are created as a form of digital currency with the purpose of maintaining a stable value, rather than being valued on speculation. To achieve this, stablecoins are tied to real-world fiat currencies and assets, such as the US dollar (USD) or gold.Products in this category support core functions such as stablecoin issuance, smart contract deployment, reserve and collateral management, fiat on/off-ramps, wallet and payment integrations, cross-border remittances, and compliance with KYC/AML and audit requirements. Stablecoin infrastructure software is used by financial institutions, fintech institutions, blockchain developers, and enterprises seeking to offer programmable money, streamline digital payments, or build stable, interoperable assets on distributed ledgers.
