A diesel-powered telescopic boom lift is an aerial work equipment that utilizes a diesel engine as its power source. Through a series of mechanical transmissions and hydraulic systems, it drives the telescopic boom to extend and retract, thereby achieving platform lifting. It mainly consists of components such as a chassis, diesel engine, telescopic boom, work platform, hydraulic system, control system, and safety devices. The diesel engine provides robust power and strong endurance. The compact structure of the telescopic boom grants the equipment advantages such as a large operating range and height, high flexibility, and strong obstacle-crossing capability.
