The report requires updating with new data and is sent in 48 hours after order is placed.

According to our LPI (LP Information) latest study, the global Digital Perfume market size was valued at US$ million in 2023. With growing demand in downstream market, the Digital Perfume is forecast to a readjusted size of US$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Digital Perfume market. Digital Perfume are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Digital Perfume. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Digital Perfume market.

Digital fragrance is the main application of digital fragrance technology. Digital fragrance technology is simply a device that stores and allows users to smell scents in a digital space. It’s a part of the Human-Computer Interaction (HCI). Creating a digital scent may be quite a lucrative endeavor, as a recent MIT report stated that the global perfume industry is worth $71 billion. Being able to create digital fragrances around certain virtual foods, activities, or locations would not only enhance the user experience but could also be a part of metaverse advertising. Many companies are looking to enter the metaverse to further their reach. These companies include restaurants, consumer goods, and event individual food companies, like Starbucks or Kraft Heinz. Having digital scents to go with these companies’ virtual products can make them more realistic and sellable, an attractive prospect for any potential advertiser.
