The disposable pulse flushing system is a disposable flushing system that provides pulse flushing and suction simultaneously. After being processed by the pulse gun, the flushing fluid becomes a fluid flow with a certain frequency and a certain impact force, which can thoroughly flush the deep and superficial tissues of the wound and the medullary cavity, and is easy to control. While thoroughly cleaning impurities, bacteria, tissue debris, hematoma, etc. in the wound, it also reduces secondary damage to surrounding normal tissues and reduces the chance of infection.

According to our research, the global market for medical devices is estimated at US$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years.
