The global Fish Farm Feeder Machines market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Automatic feeders are the best solution for feeding your fish for you if you go away. An automatic feeder will dispense food when you tell it to every day until it runs out of food in the drum, or the batteries run out. But food would run out first. Most auto feeders will comfortably cover a 14 day holiday period, or much longer if only small amounts of food were fed, and only once per day.

According to data from the Food and Agriculture Organization of the United Nations (FAO), the global aquatic product farming volume has shown an increasing trend from 1959 to 2021. According to preliminary statistics, the global aquatic product farming volume in 2021 was about 128 million tons. The State of World Fisheries and Aquaculture 2022 shows that total global aquaculture initial sales in 2020 was approximately US$265 billion, with farm sales estimated to total US$281.5 billion. Of the total aquaculture production, 87.5 million tons were produced of aquatic animals, mainly for human consumption; 35.1 million tons of algae, including food and non-food uses; 700 tons of shellfish and decorative pearls. Asian countries account for 70% of the global aquatic animal production in fisheries and aquaculture, followed by the Americas, Europe, Africa and Oceania. In 2021, the per capita consumption of aquatic products by Chinese residents was 14.2 kg, an increase of 0.3 kg or 2.6% over the previous year, surpassing poultry, eggs, beef and mutton, and becoming the second largest source of animal food after pork. According to the National Bureau of Statistics, in recent years,
