SUMMARY

A flight management system (FMS) is a fundamental component of a modern airliner's avionics. An FMS is a specialized computer system that automates a wide variety of in-flight tasks, reducing the workload on the flight crew to the point that modern civilian aircraft no longer carry flight engineers or navigators. In many ways, it's like the GPS in your car, with waypoints programmed in between the origin and the destination. You program in where you are going, and off it goes. The FMS will allow the airplane to hook up the autopilot, and maintain the heading within a few feet. It's amazingly accurate. The global Flight Management Systems (FMS) market will reach xxx Million USD in 2020 with CAGR xx% 2020-2025. The main contents of the report including:
