A medial stabilized knee system is an advanced type of total knee replacement implant designed to replicate the natural kinematics of the human knee, with a focus on medial (inner) joint stability. Unlike traditional knee replacement systems that rely on symmetrical movement and equal constraint on both sides, a medial stabilized system mimics the natural biomechanics of the knee by providing a stable medial compartment and a more mobile lateral compartment. This design supports natural knee motion and improves joint stability and patient satisfaction after total knee arthroplasty (TKA).

United States market for Medial Stabilized Knee System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
