Medical microinjection system is a medical device used for precise infusion of tiny doses of liquid medicine. It is usually composed of an injection pump, a syringe, a control system and a monitoring component. It can continuously or intermittently inject drugs into the patient's body at an extremely low flow rate and high precision. The system is widely used in intensive care, anesthesia, pediatrics, neonatology and clinical trials, which have extremely high requirements for drug dosage control. It helps to improve treatment safety and medication accuracy, and reduce drug waste and adverse reactions in patients.
