The global Mobile MRI System market size is predicted to grow from US$ 4246 million in 2025 to US$ 5902 million in 2031; it is expected to grow at a CAGR of 5.6% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Magnetic resonance imaging (MRI) diagnostic equipment is the most important and commonly used medical equipment in modern medical diagnosis. MRI is the most important means of diagnosing diseases and injuries of important organs (except the lungs). At present, the fixed MRI systems in hospitals are difficult to complete the rapid examination and diagnosis of 'critically ill' patients with head and neck diseases. There is an urgent need for miniaturized and mobile MRI systems in clinic. Small nuclear magnetic resonance is not a smaller version of large nuclear magnetic resonance. It has a unique technical route. At present, small permanent magnet MRI is more suitable for mobile applications.

United States market for Mobile MRI System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
