The global Bone Densitometers market was valued at 35.71 Million USD in 2021 and will grow with a CAGR of 3.64% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market verdors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A bone densitometer is used to precisely measure the density and mineral content present in the bones to diagnose clinical conditions such as osteoporosis that may cause brittle bones prone to fracture.The growth of the global bone densitometers market is driven by factors such as high incidence of disorders that cause loss of bone density, rapid increase in geriatric population, technological advancements, and benefits offered by DEXA device. However, high cost of bone densitometers and risks associated with them are anticipated to limit the market growth. Conversely, launch of several health initiatives to promote awareness about osteoporosis is expected to present lucrative opportunities for market growth during the forecast period.
