The global Nourseothricin Sulfate market size is predicted to grow from US$ 341 million in 2025 to US$ 510 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Nourseothricin sulfate is a broad-spectrum antibiotic produced by the metabolism of Streptomyces nourseothricin. Its main components are a mixture of ST-F and ST-D, which has the activity of inhibiting the growth of prokaryotes and eukaryotes. Its characteristic is that it inhibits protein synthesis by inducing mRNA miscoding. As a selective antibiotic in genetic recombination engineering research, it has high screening and specificity. The advantage of nourseothricin sulfate is that it not only has an inhibitory effect on a variety of microorganisms, but also can achieve the encoding of nourseothricin N-acetyltransferase by combining with the resistance gene nat1, thereby reducing the activity of antibiotics, providing a tool for microbial control and genetic engineering research.

United States market for Nourseothricin Sulfate is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
