The piano trail is an innovative urban landscape design that combines music with walking, providing people with a new interactive experience. The piano trail is a trail designed to simulate a piano keyboard. This trail uses sensing technology to capture the rhythm of pedestrians' footsteps and convert them into pleasant notes. Whenever pedestrians walk on the trail, every step they take seems to be playing a piano piece, making the walking process full of musical rhythm and fun. The working principle of the piano trail is mainly based on pressure sensing technology and audio synthesis technology. There are multiple inductive 'keys' laid on the surface of the trail, and these keys are equipped with pressure sensors. When pedestrians step on the keys, the pressure sensors capture this action and convert it into electrical signals. These electrical signals are then transmitted to the audio synthesizer, which converts these electrical signals into corresponding musical sounds according to the preset notes and rhythms. In the end, what pedestrians hear is the piano music corresponding to the rhythm of their walking.
