Single glass and plastic greenhouses are basic agricultural structures that use a single layer of glass or plastic film as the covering material to provide light transmission, thermal insulation, and environmental protection for crop cultivation. They are widely used for vegetables, flowers, seedlings, and seasonal crop production due to their low construction cost and flexible installation.

The industrial chain includes upstream materials such as glass panels, plastic films, steel frames, aluminum profiles, fasteners, and ventilation components. The midstream involves greenhouse design, structural fabrication, and on-site installation. Downstream applications mainly include commercial farms, horticulture bases, seedling nurseries, and small-scale agricultural operations.

The single glass and plastic greenhouse market continues to expand steadily as modern agriculture emphasizes controlled growing environments and improved

productivity. These greenhouses remain attractive due to their cost-effectiveness, ease of construction, and adaptability to different climates and farming scales. Growth is driven by rising demand for protected cultivation, increasing vegetable and horticulture production, and government support for agricultural infrastructure modernization. Technological improvements in plastic films, ventilation systems, and lightweight structural materials enhance durability and climate control efficiency. As sustainable agriculture and year-round crop production gain importance, single glass and plastic greenhouses are expected to maintain stable demand, particularly in emerging and developing agricultural markets.
