A SLAM navigation hotel food delivery robot is an autonomous service device that leverages Simultaneous Localization and Mapping (SLAM) technology to navigate hotel environments for automated meal delivery. Equipped with sensors like LiDAR, cameras, and IMUs, it uses SLAM algorithms to simultaneously build real-time maps of hotel corridors, elevators, and floors while determining its own position, enabling dynamic obstacle avoidance and precise pathfinding. Featuring insulated compartments for food preservation, it integrates with hotel management systems or guest apps to receive delivery commands, then autonomously travels to specified rooms—even interacting with elevators via IoT connectivity—using SLAM-generated maps to ensure accurate navigation. This technology eliminates the need for pre-set tracks, allowing adaptive movement in complex layouts, and enhances hotel service efficiency with contactless, 24/7 delivery while reducing human intervention.

United States market for SLAM Navigation Hotel Food Delivery Robot is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
