The global Steel Top Iron Skirt Combined Piston market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The steel top iron skirt combined piston is an engine piston structure designed for high strength and wear resistance, and is widely used in heavy-duty diesel engines and other high-power output industrial machinery. The design feature of this structure is that the top of the piston is made of high-strength steel material, which can withstand high combustion pressure and temperature, while the piston skirt is made of cast iron material, which provides good thermal conductivity and wear resistance. The heat resistance and strength of the steel top enable the piston to maintain its shape and strength under high temperature and high pressure environments, while the use of the iron skirt reduces the overall manufacturing cost, while reducing the thermal expansion coefficient and enhancing the matching degree between the piston and the cylinder wall.

United States market for Steel Top Iron Skirt Combined Piston is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Steel Top Iron Skirt Combined Piston is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
