The global Stepper Motor Electronic Expansion Valve market size is predicted to grow from US$ 646 million in 2025 to US$ 890 million in 2031; it is expected to grow at a CAGR of 5.5% from 2025 to 2031.

The stepper motor electronic expansion valve is an electronic expansion valve that uses stepper motor drive technology. It is widely used in refrigeration, air conditioning and heat pump systems to control the flow of refrigerant, thereby adjusting the evaporation pressure of the refrigerant to achieve the purpose of accurately controlling the temperature and improving the energy efficiency of the system. Unlike traditional mechanical expansion valves (such as thermal expansion valves, capillary tubes, etc.), the stepper motor electronic expansion valve uses an electronic control system that can accurately control the flow of refrigerant, has a fast response speed and high adjustment accuracy, and is suitable for more complex refrigeration systems or applications that require higher energy-saving performance.

United States market for Stepper Motor Electronic Expansion Valve is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
